

Case in point: Bending of components on a press brake after prior laser cutting

Question / Challenge

Our customers in many sectors of the steel industry know us primarily as a supplier of stainless steel and nickel alloy products. The laser cutting services provided by our service center are also well known on the market. However, the growing needs and requirements of our customers have meant that our range of services has expanded to include new possibilities.

Hempel Special Metals problem solving and customer benefit:

Many of the semi-finished products and components that we cut on the laser for our customers also require further shaping by bending. In order to provide a full range of services, reduce costs and speed up lead times, Hempel Special Metals has extended its services to include press brake bending. This is exactly what our company philosophy is: following customer needs and working in partnership.

Here is a small selection:
